SERVICE & EXPERIENCE

Service Design Consultancy

We help you design services that genuinely work for the people who use them - by connecting what users need with how your organisation actually delivers.

mutomorro

CONTEXT

We know good service design is not just about the user journey. It is about the organisation that delivers it.

Service design has rightly put users at the centre. Understanding what people need, mapping their journeys, prototyping better interactions - this is important work. But a beautifully designed service still fails if the organisation behind it cannot deliver it reliably, adapt it when things change, or sustain it over time.

The gap between the designed service and the delivered service is where most improvement efforts come unstuck. The service looks right on paper, but the organisational reality - team capacity, information flow, operational constraints, culture - means the experience people actually receive falls short of what was intended.

We help organisations where...

You want services that genuinely work for the people who use them - designed around their needs, not just your processes.

You want services shaped by the people who rely on them

We help you design from the user's perspective - connecting what people need with how you deliver

You want the whole journey to work, not just the parts each team can see

We help you design end-to-end experiences that feel seamless and considered

You want services that learn and adapt as needs change

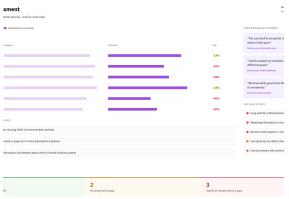
We help you build in the feedback loops that keep services improving over time

You want design thinking to become part of how your organisation works

We help you build the capability to keep designing better services yourselves

Services exist within ecosystems

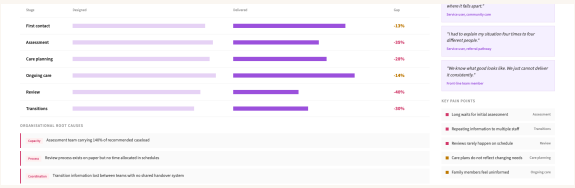
A service does not exist in isolation. It is delivered by an organisation - by people working in teams, following processes, using systems, operating within a culture. The quality of the service is shaped by the quality of all of these things. You cannot design a great service without understanding the ecosystem that will deliver it.



OUR APPROACH

Four connected areas of work

Every service design challenge is different. But our service design consultancy typically moves through four connected areas - understanding the service and the system that delivers it, designing improvements that account for both, implementing changes across the service and the organisation, and building your capability to keep improving services over time.

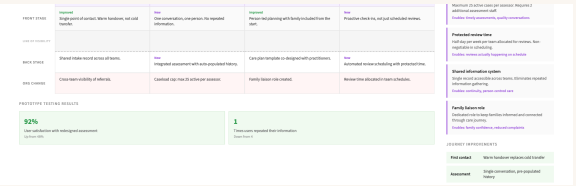


01

Understand

Good service design starts with understanding - but not just understanding the user. You need to understand the whole picture: what people need from the service, how the service currently works, and what the organisational system behind it enables or constrains.

A clear picture of the service from both sides - what users need and what the organisational system currently delivers, with priorities for where improvement matters most.

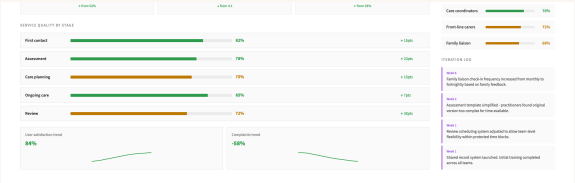


02

Co-design

The best services are designed with the people who use them and the people who deliver them. Users bring the perspective of what they actually need. Delivery teams bring the knowledge of what is practically possible. Together, they create designs that are desirable, feasible, and genuinely deliverable.

A service design that works for the people who use it and the organisation that delivers it - tested, practical, and ready for implementation.

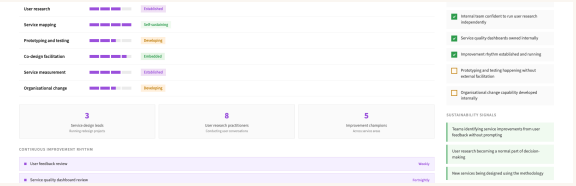


03

Implement

A service design on paper is a hypothesis. Making it real is where you find out what works, what needs adjusting, and what the organisation needs to change to deliver it properly. Implementation is not just launching - it is a learning process.

A redesigned service that works in reality - refined through real experience, supported by the organisational changes needed to deliver it well.



04

Build capability

Great services are never finished. They evolve as user needs change, as the organisation develops, and as you learn from what works. The goal is to build the internal capability to keep designing, testing, and improving services as an ongoing practice.

An organisation that keeps designing better services - because the capability to listen, design, and improve is part of how it works.

80%

of organisations believe they deliver a good experience - only 8% of customers agree

Bain

40%

of customer contacts are failure demand - avoidable if the service worked properly

Vanguard

6x

cheaper to fix a service at the design stage than after launch

Design Council

91%

of dissatisfied customers will not return

ThinkJar

OUTCOMES

What becomes possible

Organisations we have partnered with through our service design consultancy describe a shift in how services feel - for users and for the people delivering them. Services become simpler, more responsive, and more satisfying. The organisation behind them works better too.

Services that work for people	Because they were designed around real needs, not internal assumptions
Less failure demand	Because the root causes of complaints and workarounds have been addressed, not just managed
Teams that take pride	Because delivering a well-designed service feels good - people can see the difference they make
Services that learn	Because the capability to improve is built in, so services keep getting better
Organisation and service aligned	Because both were designed together, so the organisation can deliver what it promises

> *Good service design is about more than beautiful blueprints. It is about creating services that genuinely work - for the people who use them and the organisation that delivers them. That requires designing both sides together.*
